

## Performance graphs for tables

### Time graph :

Your aim must be to minimize your time. If you know your tables really well, you should be able to do each test in less than 2 minutes !!!

**Marks in each test :**

A reason for knowing your tables : Mom ask in the supermarket : “ I want 9 loaves of bread and each loaf costs R8. How much money should I have with me to be able to afford this ? “ You want an instant answer, not go searching for a piece of paper, pencil or a calculator !!

Think of more reasons you have to know your tables !!
